CONTENTS

FOREWORD 3
INTRODUCTION 5
1 Scope 6
2 Normative references 6
3 Terms and definitions 6
4 General information 8
4.1 Moisture sensitive devices 8
4.2 Moisture sensitivity level (MSL) 8
4.3 Relation to other environmental test methods (humidity tests) 8
5 Assessment of moisture sensitivity 9
5.1 Identification of non-moisture sensitive devices 9
5.2 Classification 9
6 Test procedure 10
6.1 General 10
6.1.1 Structurally similar components 10
6.1.2 Verification and validation tests 10
6.1.3 Selection of applicable soak conditions and temperature profile 10
6.2 Drying 10
6.3 Moisture soak 10
6.4 Temperature load 11
6.4.1 Classification temperature profile 11
6.4.2 Classification temperature profile for special devices 12
6.4.3 Reflow 12
6.5 Recovery 13
6.6 Final measurements 13
6.6.1 Requirements 13
6.6.2 Visual inspection 13
6.6.3 Electrical measurements 14
6.6.4 Non-destructive inspection (if required) 14
6.7 Classification 14
6.8 Information to be given in the relevant specification 14
7 Requirements to packaging and labelling 14
7.1 Packaging process 14
7.1.1 Drying of MSDs and carrier materials before being sealed in MBBs 14
7.1.2 Evacuation and sealing 15
7.2 Packaging material for dry pack 15
7.2.1 Moisture barrier bag (MBB) 15
7.2.2 Desiccant 16
7.2.3 Humidity indicator 18
7.3 Information to be given on labels 18
8 Handling of moisture sensitive devices 19
8.1 Storage 19
8.1.1 Recommended storage conditions 19
8.1.2 Shelf life 19
8.1.3 Floor life 20
8.2 ESD 20

8.3 Humidity indication ... 20
8.3.1 Humidity indicator card (HIC) ... 20
8.3.2 Moisture indicating desiccant ... 21
8.4 Unpacking and re-packing ... 21
9 Drying ... 21
9.1 Drying options ... 21
9.2 Methods ... 22
9.2.1 General considerations for baking ... 22
9.2.2 Bakeout times ... 23
9.2.3 ESD protection ... 23
9.2.4 Reuse of carriers ... 23
9.2.5 Solderability limitations ... 23
Annex A (informative) Moisture sensitivity of assemblies ... 24
Annex B (informative) Mass/gain loss analysis ... 25
Annex C (informative) Baking of devices ... 26
C.1 Baking time and conditions ... 26
C.2 Example of a baking process ... 26
Annex D (normative) Moisture sensitivity labels ... 27
D.1 Object ... 27
D.2 Graphical symbols and labels ... 27
D.2.1 Graphical symbols for moisture sensitivity ... 27
D.2.2 Moisture sensitivity identification label (MSID) ... 28
D.2.3 Moisture sensitivity caution label (MSCL) ... 28
Bibliography ... 30

INTERNATIONAL ELECTROTECHNICAL COMMISSION

Surface mounting technology -
Part 4: Classification, packaging, labelling and handling of moisture sensitive devices

FOREWORD

1) The International Electrotechnical Commission (IEC) is a worldwide organization for standardization comprising all national electrotechnical committees (IEC National Committees). The object of IEC is to promote international co-operation on all questions concerning standardization in the electrical and electronic fields. To this end and in addition to other activities, IEC publishes International Standards, Technical Specifications, Technical Reports, Publicly Available Specifications (PAS) and Guides (hereafter referred to as "IEC Publication(s)"). Their preparation is entrusted to technical committees; any IEC National Committee interested in the subject dealt with may participate in this preparatory work. International, governmental and non-governmental organizations liaising with the IEC also participate in this preparation. IEC collaborates closely with the International Organization for Standardization (ISO) in accordance with conditions determined by agreement between the two organizations.
2) The formal decisions or agreements of IEC on technical matters express, as nearly as possible, an international consensus of opinion on the relevant subjects since each technical committee has representation from all interested IEC National Committees.
3) IEC Publications have the form of recommendations for international use and are accepted by IEC National Committees in that sense. While all reasonable efforts are made to ensure that the technical content of IEC Publications is accurate, IEC cannot be held responsible for the way in which they are used or for any misinterpretation by any end user.
4) In order to promote international uniformity, IEC National Committees undertake to apply IEC Publications transparently to the maximum extent possible in their national and regional publications. Any divergence between any IEC Publication and the corresponding national or regional publication shall be clearly indicated in the latter.
5) IEC itself does not provide any attestation of conformity. Independent certification bodies provide conformity assessment services and, in some areas, access to IEC marks of conformity. IEC is not responsible for any services carried out by independent certification bodies.
6) All users should ensure that they have the latest edition of this publication.
7) No liability shall attach to IEC or its directors, employees, servants or agents including individual experts and members of its technical committees and IEC National Committees for any personal injury, property damage or other damage of any nature whatsoever, whether direct or indirect, or for costs (including legal fees) and expenses arising out of the publication, use of, or reliance upon, this IEC Publication or any other IEC Publications.
8) Attention is drawn to the Normative references cited in this publication. Use of the referenced publications is indispensable for the correct application of this publication.
9) IEC draws attention to the possibility that the implementation of this document may involve the use of (a) patent(s). IEC takes no position concerning the evidence, validity or applicability of any claimed patent rights in respect thereof. As of the date of publication of this document, IEC had not received notice of (a) patent(s), which may be required to implement this document. However, implementers are cautioned that this may not represent the latest information, which may be obtained from the patent database available at https://patents.iec.ch. IEC shall not be held responsible for identifying any or all such patent rights.

IEC 61760-4 has been prepared by IEC technical committee 91: Electronics assembly technology. It is an International Standard.

This second edition cancels and replaces the first edition published in 2015 and Amendment 1:2018. This edition constitutes a technical revision.

This edition includes the following significant technical changes with respect to the previous edition:

a) The content is updated to cover the classification conditions given in the new editions of J-STD-020F and IEC 60068-2-58.

The text of this International Standard is based on the following documents:

FDIS	Report on voting
91/2101/FDIS	91/2111/RVD

Full information on the voting for its approval can be found in the report on voting indicated in the above table.

The language used for the development of this International Standard is English.

This document was drafted in accordance with ISO/IEC Directives, Part 2, and developed in accordance with ISO/IEC Directives, Part 1 and ISO/IEC Directives, IEC Supplement, available at www.iec.ch/members_experts/refdocs. The main document types developed by IEC are described in greater detail at www.iec.ch/publications.

A list of all parts in the IEC 61760, published under the general title *Surface mounting technology*, can be found on the IEC website.

The committee has decided that the contents of this document will remain unchanged until the stability date indicated on the IEC website under webstore.iec.ch in the data related to the specific document. At this date, the document will be

– reconfirmed,
– withdrawn, or
– revised.

INTRODUCTION

Due to the higher temperature profiles of reflow soldering processes using tin-silver-copper alloys or other lead-free solder alloys with higher melting temperatures than Sn-Pb eutectic solder, the sensitivity of components against soldering heat, when being exposed to moisture before soldering, becomes an increasingly important factor.

The currently existing standards describing the moisture sensitivity classification of devices are applicable for plastic encapsulated semiconductors and similar solid state packages (e.g. IEC 60749-20 [1]), but not for other types of components.

This part of IEC 61760 also extends the classification and packaging methods as described in J-STD-020F [2] and J-STD-033 [3]. It is intended to be used for such type of components, where J-STD-020F [2] and J-STD-033 [3] are not required or not appropriate.

It is important to note that moisture sensitivity levels existing in both J-STD-020F [2] and this document are equivalent.

1 Scope

This part of IEC 61760 specifies the classification of moisture sensitive device into moisture sensitivity level related to soldering heat, and provisions for packaging, labelling and handling.

It extends the classification and packaging methods to such components, where currently existing standards are not required or not appropriate. For such cases, this document introduces additional moisture sensitivity levels and an alternative method for packaging.

This document applies to devices intended for reflow soldering, like surface mount devices, including specific through-hole devices (where the device supplier has specifically documented support for reflow soldering), but not to

– semiconductor devices,
– devices for flow (wave) soldering.

NOTE Background of this document and its relation to currently existing standards, e.g. IEC 60749-20 [1] or J-STD-020F [2] and J-STD-033 [3], are described in the Introduction.

2 Normative references

The following documents are referred to in the text in such a way that some or all of their content constitutes requirements of this document. For dated references, only the edition cited applies. For undated references, the latest edition of the referenced document (including any amendments) applies.
